Industrial Internship Report on

"E-commerce Web Application"

Prepared by

Akash Balaji

Executive Summary
This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with UniConverge Technologies Pvt Ltd (UCT). This internship focused on developing a real-world project within a limited time period. My project was an **E-commerce Web Application**, which simulates an online shopping platform. During this internship, I developed features such as product display, cart system, total price calculation, login/signup system, and order placement. This internship provided me with valuable exposure to real-world problem-solving and helped me improve my technical and logical skills.

8 Future work scope 8

1.Preface

This report summarizes the work completed during the internship period. The internship provided an opportunity to gain practical knowledge and experience in web development.

The project assigned was to develop an E-commerce Web Application. The project involved designing and implementing a simple online shopping system using frontend technologies.

This internship helped me understand real-world application development and improved my technical skills. I would like to thank upskill Campus, UniConverge Technologies Pvt Ltd, and my mentors for their support and guidance

2. Introduction

2.1 About UniConverge Technologies Pvt Ltd

UniConverge Technologies Pvt Ltd is a company focused on providing digital transformation solutions. It works in areas such as Internet of Things (IoT), cloud computing, machine learning, and full stack development. The company provides industrial solutions and helps organizations improve their processes using advanced technologies.

2.2 About upskill Campus

upskill Campus is a platform that provides career development opportunities through internships, training programs, and projects. It helps students gain practical experience and improve their technical and professional skills.

2.3 Objective

The main objectives of this internship were:

- To gain practical exposure to real-world project development
- To improve coding and problem-solving skills
- To understand how web applications are built
- To develop a complete working project

2.4 Reference

- Online tutorials (YouTube)
- Web development documentation
- Practice coding platforms

2.5 Glossary

- UI – User Interface
- DOM – Document Object Model
- Local Storage – Browser storage for saving data

3. Problem Statement

The goal of this project is to develop a simple and user-friendly E-commerce Web Application. The application should allow users to view products, add items to a cart, calculate the total cost, and place orders efficiently.

The problem focuses on creating an interactive and functional system that simulates a real-world online shopping experience.

4. Existing and Proposed Solution

4.1 Existing Solution

Most existing e-commerce platforms are complex systems that require backend servers, databases, and advanced frameworks. These systems provide many features but are difficult to develop for beginners.

4.2 Proposed Solution

The proposed solution is a simplified frontend-based e-commerce application. It includes the following features:

- Displaying products
- Adding products to cart
- Calculating total price
- User login and signup
- Order placement

This solution provides a basic understanding of how an e-commerce system works.

5. Proposed Design / Model

5.1 High Level Design

The system consists of:

- User Interface (HTML, CSS)
- Logic Layer (JavaScript)
- Storage (Local Storage)

Flow:
User → Interacts with UI → JavaScript processes data → Output displayed

5.2 Low Level Design

- User inputs login details
- Data stored/retrieved from local storage
- Products added to cart using JavaScript array
- Total price calculated dynamically
- Order confirmation displayed

5.3 Interfaces

- Login/Signup Interface
- Product Display Interface
- Cart Interface
- Order Confirmation Interface

6. Performance Test

6.1 Test Plan

The application was tested for:

- Login functionality
- Add to cart feature
- Total price calculation
- Order placement

6.2 Test Procedure

Manual testing was performed using a web browser. Each function was tested individually and then as a complete flow.

6.3 Performance Outcome

The application performed successfully for all features. All functionalities worked correctly without major errors. The system is efficient for a small-scale application.

7. My Learnings

During this internship, I learned:

- How to build a web application using HTML, CSS, and JavaScript
- How to manipulate the DOM dynamically
- How to implement login systems using local storage
- How to debug and fix errors in code
- Importance of project structure and planning

8. Future Work Scope

The project can be improved by:

- Adding backend and database integration
- Implementing secure authentication
- Adding payment gateway
- Improving UI/UX design
- Making the application responsive for mobile devices
